PL-D797

CMOS | SONY IMX428 | GLOBAL SHUTTER

The Pixelink PL-D797 camera is based on the Sony IMX428 3rd generation Pregius CMOS shutter sensor technology and is available in color monochrome versions. The Pixelink PL-D797 camera has a 7.1 megapixel resolution, 1.1" lens format, a 17.60mm sensor diagonal and dynamic range of 72 dB. This camera is the lower frame rate counterpart to existing PL-D757 model which features the Sony IMX420 sensor.

The PL-D797 camera is USB3 Vision compliant and is available in board level or enclosed configurations, with or without an external trigger. This model is the perfect product solution for customers who want a high quality camera, yet don't require the higher frame rate feature traditionally associated with Sony Pregius image sensors.

As with all Pixelink cameras, the new PL-D797 models are compatible with Pixelink Capture, a free, real-time, interactive, multi-camera software application.

Industry Leading Software

PIXELINK CAPTURE

Pixelink Capture is powerful multi-camera software application designed to configure “n” number of cameras and stream “n” number of cameras simultaneously in real-time high-quality video viewed in a multi-window environment. It offers options for complex image enhancements such as exposure control and filtering, in addition to multi-camera application testing and configuration.

Pixelink Capture features allows you to measure supporting point, line, circle, rectangle, polyline and polygon measurements while determining pixel location. The user can review and adjust data before exporting the findings to an Excel spreadsheet for further analysis.

Pixelink Capture also has integrated lens control (zoom & focus) for Navitar motorized lenses and accurate autofocus options for Navitar motorized fine focus mechanisms.

PIXELINK SDK

Providing full control of all camera functions, the Pixelink Software Development Kit (SDK) is the software package of choice for developers and system integrators who are integrating Pixelink cameras into their applications. The Pixelink SDK provides access to the full Pixelink Application Programming Interface (API) and provides sample applications, wrappers for many 3rd party controls, such as LabVIEW, along with full documentation.

The Pixelink SDK is compatible with Microsoft Windows and popular Linux platforms. When using the Pixelink SDK, developers can integrate Pixelink cameras into their applications with ease.
